PS C:\WINDOWS\system32> git --version
git version 2.52.0.windows.1
PS C:\WINDOWS\system32> php -v
PHP 8.2.32 (cli) (built: Jul  1 2026 08:18:26) (ZTS Visual C++ 2019 x64)
Copyright (c) The PHP Group
Zend Engine v4.2.32, Copyright (c) Zend Technologies
PS C:\WINDOWS\system32> php -m | findstr "pdo_mysql"
pdo_mysql
PS C:\WINDOWS\system32> composer --version
Composer version 2.10.2 2026-07-01 11:24:45
PHP version 8.2.32 (C:\tools\php82\php.exe)
Run the "diagnose" command to get more detailed diagnostics output.
PS C:\WINDOWS\system32> docker --version
Docker version 29.6.1, build 8900f1d
PS C:\WINDOWS\system32> docker compose version
Docker Compose version v5.1.4
PS C:\WINDOWS\system32> docker run hello-world

Hello from Docker!
This message shows that your installation appears to be working correctly.

To generate this message, Docker took the following steps:
 1. The Docker client contacted the Docker daemon.
 2. The Docker daemon pulled the "hello-world" image from the Docker Hub.
    (amd64)
 3. The Docker daemon created a new container from that image which runs the
    executable that produces the output you are currently reading.
 4. The Docker daemon streamed that output to the Docker client, which sent it
    to your terminal.

To try something more ambitious, you can run an Ubuntu container with:
$ docker run -it ubuntu bash

Share images, automate workflows, and more with a free Docker ID:
https://hub.docker.com/

For more examples and ideas, visit:
https://docs.docker.com/get-started/

PS C:\WINDOWS\system32>
```
